

Are You Losing Your Competitive Edge To Germs?

The indirect costs of workplace illness is staggering, by one estimate over \$70 billion is lost to absenteeism annually with another \$75 billion loss in productivity of employees who come to work sick.

When an employee gets sick at work the domino effect of the spread of illness can be devastating from the staff that has to cover the job to the workers family at home.

Now can you control the spread of illness-causing bacteria, viruses and germs in your workplace with SaniGuard®, by killing them on the surfaces where they live before the spread to staff and families.

Germs And Bacteria Bring New Meanings To Computer Viruses.

According to a recent study of germs in the workplace the average office desk harbors over 10 million germs, 400 times more bacteria than the average toilet seat. Without sanitizing, your desk top can sustain millions of illness causing bacteria and viruses.

In many companies janitorial staff has been instructed to stay away from desks and cubicles, which many people view as their personal space. But because SaniGuard® dries on contact it can be used on "hot spot" surfaces other products can't, like the computer keyboard and mouse, phones, calculators, copy and fax machines, even electronic devices and paper!

Microscopic, Invisible And Expensive.

The National Center for Health Statistics reports that the average per-employee cost of absenteeism has hit an all-time high of over \$800 per year. Workers in the United States miss an average of 1.5 days per year because of the flu alone that cost businesses \$20 billion in lost productivity annually.

Complete Environment Coverage.

Germs can spread through common office areas with a single touch. Use SaniGuard® on door knobs, light switches, file cabinets, water coolers, rest rooms and any high traffic areas to halt the spread of Staph, Strep, Colds and Influenza that can cripple any office in a matter of days.

By providing workers with the convenient .75 oz. size of SaniGuard® they can protect their personal environment wherever they go, even away from the office. Perfect for your sales force, traveling executives or any employees outside your facilities.

SaniGuard Dry Sanitizing Surface Spray And Total Release Fogger.

Get the competitive advantage of a healthy workplace by using SaniGuard's® unique formula to kill 99.9% of germs on contact before the germs even reach hands and can be spread to other surfaces and other employees.

SaniGuard® Dry Sanitizing Sprays and Foggers can be used everywhere in your workplace from front office areas like lobbies and conference rooms all the way to the factory floor control panels. SaniGuard® is also safe for food contact surfaces in cafeterias, work out facilities, break rooms and locker rooms.
